

The Industrial and Agricultural Revolutions and the New Society (c.1750–1900)

*Every past question on the Industrial Revolution, Methodism, Chartism
and the new ideas — answered in full, in simple words, with answer maps*

ANSWER MAP · CSS 2019 · Q4 · SECTION A (ALSO 2017 · Q3)

Explain the factors that led to the Industrial Revolution and discuss how it affected the social, political, economic and cultural life of the English people.

KEY WORDS “factors that led to” · “social” · “political” · “economic” · “cultural”

IT DEMANDS Two limbs. (1) The causes — grouped and ranked. (2) The effects — one heading for each of the four named areas, with both good and bad effects.

**VERDICT**

The Industrial Revolution happened in Britain because many favourable conditions met at once; it made Britain rich and powerful, but its first generation of workers paid a heavy price.

All 14 past items (2015–2026): nine full answers (one shown as an adaptation) and **five short notes**; the **two past MCQs** solved; **five predicted questions** with outlines.

Every answer has: the question as set · its **answer map** · **decoding the question** (what the examiner wants, in plain words) · a **model answer** with numbered headings, a figure and a verdict · **why this answer scores**.

TRAP — DO NOT FALL INTO IT · One body of knowledge, many angles

The Industrial Revolution has been asked **five** times, but never in the same way: **causes and effects** (2019), **effects only** (2017), **two revolutions together** (2018), **disruption or progress** (2026), and a **short note** (2015). Methodism has been asked as **emergence and effects** (2015) and as **beginning, features and success** (2024). Learn the facts once (T4KB); build the headings fresh from each question's own words.

HOW TO USE THIS · If you are new to this topic

Read **T4KB Part Zero and Part One** first — the ABC and the story. Every answer below assumes only what is explained there. Hard words are explained inside the answers too.

Answer 1 · The Industrial Revolution: Its Causes and Its Effects

THE QUESTION · CSS 2019 · Q4 · Section A · 20 marks

Explain the factors that led to the Industrial Revolution and discuss how it affected the social, political, economic and cultural life of the English people.

ANSWER MAP · CSS 2019 · Q4 · SECTION A (ALSO 2017 · Q3)

Explain the factors that led to the Industrial Revolution and discuss how it affected the social, political, economic and cultural life of the English people.

KEY WORDS "factors that led to" · "social" · "political" · "economic" · "cultural"

IT DEMANDS Two limbs. (1) The causes — grouped and ranked. (2) The effects — one heading for each of the four named areas, with both good and bad effects.

**VERDICT**

The Industrial Revolution happened in Britain because many favourable conditions met at once; it made Britain rich and powerful, but its first generation of workers paid a heavy price.

Figure 1 · The answer map for CSS 2019 · Q4 · Section A: every branch is one heading of the answer below.

DECODING THE QUESTION

The question has **two limbs**. "**Explain the factors that led to**" = the causes: why did it happen, and why in Britain? "**Discuss how it affected**" = the effects — and the examiner has named **four areas: social, political, economic and cultural**. Give each its own heading, in that order or a logical one. "Discuss" means show good and bad sides, and end with a judgement.

The model answer

Introduction

The **Industrial Revolution** was the great change, between about **1750 and 1850**, from making goods **by hand at home** to making them **by machine in factories**, powered first by water and then by **steam** and **coal**. Britain was the **first country in the world** to go through it. It happened because many favourable conditions came together in eighteenth-century Britain at the same time; and it changed every part of English life — how people worked, where they lived, how they were governed and what they believed.

(1) The factors that led to the Industrial Revolution

WHY BRITAIN INDUSTRIALISED FIRST

Four groups of causes that came together in eighteenth-century Britain

Figure 2 · Why Britain industrialised first: four groups of causes.

(a) A growing population

England and Wales grew from about **6 million** people in 1750 to **8.9 million** at the first census of **1801** and **17.9 million** by **1851**. More people meant more **workers** for the factories and more **buyers** for their goods.

(b) The Agricultural Revolution

New farming — **enclosure** of the open fields, **Townshend's** turnips and clover, **Tull's** seed drill, **Bakewell's** breeding — produced much more food, so a larger population could be fed. It also pushed poor cottagers off the land and towards the towns, where they became factory workers.

(c) Capital — money to invest

Britain was rich from **overseas trade**, from its **colonies**, from the slave-based sugar trade and from farming. **Banks** — the Bank of England (1694) and hundreds of country banks — lent money. Landowners and merchants had money to build mills, mines and canals.

(d) Coal and iron, close together

Britain had rich **coalfields**, often next to **iron ore** and near rivers or the sea. **Abraham Darby** smelted iron with coke at **Coalbrookdale** in **1709**; coal fed the steam engines.

(e) Transport

No part of Britain is far from the sea or a navigable river. The **Bridgewater Canal (1761)** halved the price of coal in Manchester and began a canal boom; the **Liverpool and Manchester Railway (1830)** began the railway age. There were no internal tolls, so goods moved freely.

(f) Inventions

A chain of inventions solved one problem after another: **Kay's** flying shuttle (1733), **Hargreaves's** spinning jenny (c.1764), **Arkwright's** water frame (1769), **Crompton's** mule (1779), **Cartwright's** power loom (1785) — and above all **James Watt's** improved **steam engine** (1769), which could drive machines anywhere.

(g) Markets at home and abroad

A growing home market, and a huge overseas market in the **colonies**, protected by the strongest **navy** in the world.

(h) A stable government and society

After **1688** Britain had a stable government, safe property, and laws that protected contracts and **patents**. **Nonconformists**, barred from Parliament and the universities, put their energy into business.

KEY IDEA · Weighing the factors

No single factor is enough. Other countries had coal, or trade, or inventors; Britain had **all of them at once**. That combination is why it came first.

(2) The economic effects

- **Britain became the "workshop of the world"**: by 1850 it made about **half** the world's iron and cotton cloth.
- **The factory system** replaced the **domestic system**: work moved from the cottage to the mill, with fixed hours, the clock and wages.
- **New industries and regions**: cotton in Lancashire, wool in Yorkshire, iron in the Black Country and South Wales, coal in the North-East, ships on the Clyde.
- **New classes**: a rich **middle class** of factory owners and merchants; a large **working class** living on wages.
- **Winners and losers**: the owners prospered; the **handloom weavers**, whose skill was replaced by the power loom, were ruined.

(3) The social effects

- **Towns grew very fast:** Manchester from about **75,000** (1801) to **300,000** (1851). The **1851 census** showed that more people lived in towns than in the countryside — the first large country ever to do so.
- **Terrible living conditions:** crowded **back-to-back** houses, no clean water or sewers; **cholera** in 1831–32 and 1848–49.
- **Hard working conditions:** children of five or six in the mills, twelve-hour days, accidents; women and children underground in mines.
- **Reform slowly followed:** the **Factory Act (1833)** with inspectors, the **Mines Act (1842)**, the **Ten Hours Act (1847)**, the **Public Health Act (1848)**.

(4) The political effects

- **The middle class demanded a voice:** the new towns had no MPs. The **Reform Act of 1832** gave them seats and gave middle-class men the vote.
- **The working class demanded a voice:** **Chartism** (1838–48) campaigned for votes for all men; later Reform Acts (1867, 1884) granted it.
- **Free trade:** the Anti-Corn Law League, led by manufacturers, won the **repeal of the Corn Laws (1846)**.
- **Trade unions** became legal (1824), formed the **TUC** (1868), and later the **Labour Party** (1900).
- **The state grew:** inspectors and boards of health ended pure *laissez-faire* (the idea that government should not interfere).

(5) The cultural effects

- **Religion:** **Methodism** and other chapels spread in the new towns and mining villages; **Sunday schools** taught millions to read.
- **Reading:** cheap newspapers, carried by rail; **Mechanics' Institutes** for workers.
- **Literature:** novels about the industrial towns — **Dickens's** *Hard Times*, **Gaskell's** *Mary Barton*, **Disraeli's** *Sybil* with its "**two nations**" of rich and poor.
- **A new sense of time:** factory hours and "railway time" replaced the rhythm of the seasons.
- **Pride:** the **Great Exhibition** of **1851** in the Crystal Palace.

(6) Assessment: better or worse?

Historians disagree. The **optimists** (**T. S. Ashton**) argue that industry created jobs and cheaper goods and, in the long run, raised living standards. The **pessimists** (**Hobsbawm**, **E. P. Thompson**, the **Hammonds**) stress the suffering of the first generation. Modern research (**Feinstein**) suggests real wages hardly rose until the **1840s**, then rose steadily — so both are partly right.

VERDICT · Conclusion

The Industrial Revolution happened in Britain because population, farming, capital, coal, transport, inventions, markets and a stable government all came together. It made Britain the richest and most powerful country in the world and changed every area of life — economic, social, political and cultural. For the first generation of workers the price was very high; for their grandchildren the gains were real and lasting.

WHY THIS ANSWER SCORES · Why this answer scores

Both limbs answered in full · the causes **grouped and weighed**, not just listed · **one heading for each of the four named areas**, using the examiner's own words · **figures and dates** throughout (populations, Manchester, 1833, 1846) · the **historians' debate** gives a balanced judgement.

Answer 2 · The Effects of the Industrial Revolution on English Life

THE QUESTION · CSS 2017 · Q3 · Section A · 20 marks

The Industrial Revolution drastically changed methods of production in England. How did it affect the social, economic, political and cultural life of the English people?

DECODING THE QUESTION

The full question: "**The Industrial Revolution drastically changed methods of production. How did it affect the social, economic, political and cultural life of the English people?**" This is **Answer 1 without the causes**. The opening sentence ("drastically changed methods of production") tells you to begin with the change **from hand to machine, from home to factory**.

How to adapt Answer 1

- 1. Introduction:** explain "methods of production" — the **domestic system** (hand-work at home for a merchant) replaced by the **factory system** (machines, steam power, wage labour in one building). Name the key inventions in one sentence (jenny, water frame, mule, power loom, Watt's steam engine).
- 2. Skip section (1) of Answer 1** (the causes) — or reduce it to two lines.
- 3. Use sections (2)–(5) of Answer 1 in full**, one heading for each area. Put **social** first and **economic** second, to follow the question's order.
- 4. Give more detail on each area** to fill the space the causes took: for **social**, add the family split by the factory day and the loss of village life; for **economic**, add the canal and railway booms; for **political**, add the growth of the state; for **cultural**, add Methodism and the novels.
- 5. Keep section (6)** (optimists and pessimists) and the verdict.

WHY THIS ANSWER SCORES · Why this works

The examiner asked "**how did it affect**" four named areas — so the four headings **are** the answer. Explaining "methods of production" first shows you understood the question's opening statement.

Answer 3 · Two Movements, Agrarian and Industrial, Revolutionised English Lives

THE QUESTION · CSS 2018 · Q3 · Section A · 20 marks

'The 18th century witnessed the emergence, rise and growth of two movements (Agrarian and Industrial) which revolutionised the lives of the English people in particular and later the world in general.' Comment on the statement.

ANSWER MAP · CSS 2018 · Q3 · SECTION A

"The 18th century witnessed the emergence, rise and growth of two movements (Agrarian and Industrial) which revolutionised the lives of the English people in particular and later the world in general."
Comment on the statement.

KEY WORDS "Agrarian and Industrial" · "revolutionised the lives" · "English people" · "the world"

IT DEMANDS Comment = agree or disagree with reasons. Explain both revolutions, show how they were linked, then their effects on England and on the world. Test the word "revolutionised".

VERDICT

Agree: though the changes were gradual, the Agrarian and Industrial Revolutions together transformed English life within a century and then the whole world.

Figure 3 · The answer map for CSS 2018 · Q3 · Section A: every branch is one heading of the answer below.

DECODING THE QUESTION

The full statement: "**The 18th century witnessed the emergence, rise and growth of two movements (Agrarian and Industrial) which revolutionised the lives of the English people in particular and later the world in general.**" "**Comment**" means say whether you agree, and why. You must explain **both** revolutions — the **Agrarian** (farming) as well as the **Industrial** — show how they were **linked**, show their effects on **England**, then on **the world**, and test the word "**revolutionised**".

The model answer

Introduction

"**Agrarian**" means to do with farming and land. In the eighteenth century Britain went through **two great changes** at the same time: an **Agricultural (Agrarian) Revolution**, which changed how food was grown, and an **Industrial Revolution**, which changed how goods were made. The statement is broadly right: together these two movements changed where English people lived, how they worked and what they ate — and Britain's example later spread across the world.

(1) The Agrarian Revolution

THE AGRICULTURAL REVOLUTION

How farming changed — and who gained and who lost

Figure 4 · The Agricultural Revolution: the old way, the changes and the results.

(a) The old way

Villages farmed **open fields** divided into strips; one field was left **fallow** (empty) every year; animals grazed on the shared **common**. It was fair but wasteful.

(b) The changes

- **Enclosure:** about **4,000** Acts of Parliament (1750–1850) turned open fields and commons into separate, fenced farms.
- **New crops:** **Townshend's** turnips and clover and the **Norfolk four-course rotation** — no more fallow.
- **New tools and breeding:** **Tull's** seed drill; **Bakewell's** bigger sheep and cattle.
- **Spreading the ideas:** **Coke of Norfolk**, **Arthur Young**, the Board of Agriculture (1793).

(c) How it changed lives

Far more food; richer landlords and farmers; but cottagers lost the common and became **landless labourers** — many moved to the towns.

(2) The Industrial Revolution

- **Machines:** the spinning jenny, water frame, mule and power loom moved cloth-making from the cottage to the **factory**.
- **Power:** **Watt's** steam engine (1769) and **coal**.
- **Iron:** **Darby** (1709) and **Cort** (1784).
- **Transport:** canals (1761) and railways (1830).

(3) How the two movements were linked

1. **Food:** the Agrarian Revolution fed the growing town population.
2. **Workers:** it released labour from the land for the factories.
3. **Money:** landowners' profits were invested in canals, mines and railways.
4. **Markets:** prosperous farmers bought manufactured goods; industry sent back iron ploughs and, later, machines.

KEY IDEA · One change, two parts

The two revolutions were not separate. The farms fed the factories and supplied their workers; the factories enriched the farms. Together they turned a country of villages into a country of towns.

(4) How they revolutionised English lives

- **Where people lived:** from village to town — by **1851** more English people lived in towns than in the country.
- **How they worked:** from their own time on their own strip or loom, to the factory clock and a wage.
- **Society:** a new **middle class** and a new **working class**.
- **Politics:** the **Reform Act of 1832**, **Chartism**, trade unions.
- **Religion and ideas:** **Methodism**, Liberalism, Utilitarianism, Socialism.
- **Health and hardship:** slums, cholera, child labour — then reform.

(5) How they later changed the world

- Industry spread to **Belgium, France, Germany** and the **USA** in the nineteenth century, and to **Japan** after 1868.
- Britain's industrial strength built its **empire** and made it the centre of world **trade** and finance.
- The world economy of factories, railways and global markets grew from the British example — so did the modern debate about capitalism and socialism.

(6) Was it really a "revolution"?

Some historians (**N. F. R. Crafts**) argue that growth was **slow and gradual**, not sudden; enclosure had begun centuries earlier; many people still worked in small workshops in 1850. But "revolution" describes the **scale** of the change, not its speed: within about a century the whole way of life was transformed.

VERDICT · Conclusion

The statement is correct. Though each change was gradual, the Agrarian and Industrial Revolutions, working together, transformed English life more deeply than any political revolution — and within a century their effects had spread to the whole world.

WHY THIS ANSWER SCORES · Why this answer scores

It **explains both** movements (many candidates forget the Agrarian one) · it shows the **link** between them · it answers "**English people**" and "**the world**" separately · it **tests the word "revolutionised"** — which is what "comment" asks.

Answer 4 · Disruption or Progress? The Industrial Revolution in the Regions

THE QUESTION · CSS 2026 · Q3 · Section A · 20 marks

Critically evaluate the extent to which the Industrial Revolution transformed British society more through disruption than through progress. Use regional examples to support your argument.

ANSWER MAP · CSS 2026 · Q3 · SECTION A

Critically evaluate the extent to which the Industrial Revolution transformed British society more through disruption than through progress. Use regional examples to support your argument.

KEY WORDS “extent” · “disruption” · “progress” · “regional examples”

IT DEMANDS A how-far judgement: weigh disruption against progress, using named regions as evidence in every section. Say clearly which was greater, and when.

VERDICT

For the generation that lived through it, disruption outweighed progress; for their children and grandchildren, progress won — so the statement is true of the early stages but not of the revolution as a whole.

Figure 5 · The answer map for CSS 2026 · Q3 · Section A: every branch is one heading of the answer below.

DECODING THE QUESTION

"**Critically evaluate the extent**" = a how-far question: you must weigh two things and give a clear judgement. "**Disruption**" = the damage done to old ways of life (lost jobs, slums, disease, broken families). "**Progress**" = lasting improvement (wealth, jobs, health, rights). "**Use regional examples**" is an order: name places — **Lancashire, Yorkshire, the Midlands, South Wales, the North-East, Scotland** — in every section, not just once.

The model answer

Introduction

The Industrial Revolution changed Britain between about 1750 and 1850. The question is whether it changed society **more by disruption** — destroying old livelihoods and communities — **than by progress** — creating wealth and better lives. This answer argues that the balance **changed over time**: for the first generation (about **1780–1840**) disruption was greater; after about **1850** progress clearly outweighed it. It also varied from **region** to region.

INDUSTRIAL BRITAIN AROUND 1850

The coalfields, the textile districts, the iron towns and the first railway

Figure 6 · The industrial regions of Britain around 1850.

(1) Disruption: jobs and skills destroyed

- **Lancashire:** the **handloom weavers**, once skilled and well paid, were ruined by the power loom; their wages fell from about 20 shillings a week (1800) to under 6 by the 1830s.
- **Nottingham, Yorkshire and Lancashire:** the **Luddites (1811–16)** smashed the machines that were taking their jobs; troops were sent in and machine-breaking was made a capital crime.
- **The countryside:** enclosure and threshing machines drove southern farm labourers to the **Swing Riots (1830)**.

(2) Disruption: towns, health and family

- **Manchester:** **Engels (1845)** described slums of cellars and filth; working people's life expectancy was under 30.
- **Merthyr Tydfil** (South Wales): the biggest town in Wales, built round ironworks, had no drains or clean water; the **Merthyr Rising of 1831** was crushed by soldiers.
- **Glasgow:** some of the worst slums in Europe; cholera struck again and again.
- **Families:** children as young as five in the mills of Lancashire and the pits of the North-East; family life broken by the factory day.

(3) Progress: wealth, jobs and goods

- **Lancashire's cotton** became Britain's greatest export; mill towns grew rich.
- **Leeds and Bradford** (Yorkshire) became great wool cities; **Birmingham** the "city of a thousand trades".
- **South Wales:** the **Dowlais** ironworks became the largest in the world; Welsh coal fuelled ships worldwide.
- **The North-East:** the world's first public railway (**Stockton and Darlington, 1825**); Tyneside engineering.
- **The Clyde** (Glasgow) became the shipbuilding centre of the world.
- **Real wages** rose steadily after the **1840s**; cheap cotton, soap, tea and sugar; railways let ordinary people travel.

(4) Progress: reform and rights

- **Factory Acts (1833, 1847)** and the **Mines Act (1842)** protected children and women.
- The **Public Health Act (1848)**; **Birmingham** was rebuilt with clean water, gas and parks by **Joseph Chamberlain** in the **1870s**.
- **Rights:** the Reform Acts (1832, 1867, 1884), legal trade unions, schools for all (1870).
- These reforms were themselves a **response to the disruption** — progress came partly because people protested against the damage.

(5) What the historians say

- **Pessimists** — the **Hammonds, Hobsbawm, E. P. Thompson** — say disruption dominated: workers lost independence, community and health.
- **Optimists** — **Ashton, Hartwell** — say progress dominated: industry created the wealth that later raised everyone.

- **Feinstein's** figures: wages flat until the 1840s, then rising — supporting "disruption first, progress later".

(6) Weighing the extent

Period or group	Disruption	Progress
First generation (to c.1840)	Greater: weavers, Luddites, slums, cholera	Limited to owners and skilled engineers
After c.1850	Declining: reform, better towns	Greater: rising wages, rights, cheap goods
Old craft regions (Lancashire weavers, Midlands knitters)	Severe	Slow
New industrial regions (Clyde, Tyneside, Birmingham)	Real	Strong

VERDICT · Conclusion

The Industrial Revolution transformed British society **more through disruption than progress for those who lived through its early stages** — the handloom weavers of Lancashire, the Luddites of Nottingham, the slum-dwellers of Manchester and Merthyr. But the wealth it created, and the reforms that disruption forced, meant that **by the second half of the century progress had clearly won**. The statement is therefore true of the revolution's first half-century, but not of the revolution as a whole.

WHY THIS ANSWER SCORES · Why this answer scores

It **defines both key words** · it gives **regional examples in every section** (Lancashire, Yorkshire, Nottingham, Merthyr, Glasgow, Birmingham, the Clyde, Tyneside) · it uses **historians and figures** · and it gives a **clear, time-based judgement** on "the extent" — exactly what "critically evaluate" demands.

Answer 5 · The Emergence of Methodism and Its Good and Bad Effects

THE QUESTION · CSS 2015 · Q3 · Paper II · 20 marks

Describe the emergence of the Methodist Movement in England. What were its good and bad effects on the people?

ANSWER MAP · CSS 2015 · PAPER II · Q3 (ALSO 2024 · Q4; SHORT NOTES 2015, 2025)

Describe the emergence of the Methodist Movement in England. What were its good and bad effects on the people?

KEY WORDS "emergence" · "Methodist Movement" · "good effects" · "bad effects"

IT DEMANDS Two limbs. (1) How and why Methodism began — the story and the causes. (2) Its effects on ordinary people, divided into good and bad, with a judgement.

VERDICT

Methodism emerged because the established Church failed the poor; its good effects — discipline, self-respect, education and leadership — outweighed its bad, though it did teach patience more than protest.

Figure 7 · The answer map for CSS 2015 · Q3 · Paper II: every branch is one heading of the answer below.

DECODING THE QUESTION

Two limbs. "**Describe the emergence**" = tell the story of how and why Methodism began and grew. "**Good and bad effects on the people**" = its effects on ordinary English people — give **both** sides, under separate headings, then a judgement. A beginner's tip: **Methodism** is a Christian movement, a branch of Protestantism, begun by **John Wesley**.

The model answer

Introduction

Methodism was a **religious revival** — a movement to bring new life to Christianity — that began inside the Church of England in the **1730s**, led by **John Wesley**, his brother **Charles** and **George Whitefield**. It took a warm, simple Christian message to the poor, above all in the new mining and industrial districts. Its effects on ordinary people were mostly good — sobriety, education, self-respect — although critics say it also taught them to accept their poverty.

(1) Why Methodism emerged

(a) A Church that had grown cold

The **Church of England** — the official, state church — was comfortable and sleepy. Many clergy were gentlemen who held several parishes (**pluralism**) and did not live in them (**non-residence**). Sermons were dry and intellectual, and the poor felt unwelcome.

(b) Churches in the wrong places

The population was growing and moving. New mining villages and industrial towns had **no church** at all, and no one to care for the people's spiritual needs.

(c) People in need

Poor, uprooted people faced hard work, drink, disease and early death. They wanted comfort, hope and a sense that they mattered.

(2) How Methodism emerged

- **1729 — the Holy Club:** at **Oxford**, John and Charles Wesley and friends met to pray, study the Bible and visit prisoners by strict rules. Other students mocked them as "**Methodists**" because of their **method**.
- **24 May 1738 — Wesley's conversion:** at a meeting in **Aldersgate Street**, London, Wesley felt his "**heart strangely warmed**" and became sure of God's love for him personally. This is taken as the start of Methodism.
- **1739 — field preaching:** many churches closed their pulpits to him, so Wesley followed **Whitefield** and preached **in the open air** — first to the coal miners of **Kingswood** near **Bristol**. Thousands came.
- **Organisation:** members met weekly in **classes** of about 12; **lay preachers** (ordinary people) spread the message; travelling preachers covered **circuits**; the **Conference** (from **1744**) ran the movement.

- **Wesley's travels:** about **250,000 miles** on horseback and **40,000** sermons in over fifty years.
- **Separation:** Wesley died in **1791** still a member of the Church of England, but the Methodists soon became a separate church.

(3) The good effects on the people

1. **Sobriety and good behaviour:** Methodists gave up drunkenness, gambling, swearing and fighting; many families became more stable and better off.
2. **Thrift and hard work:** they saved money and worked steadily — some rose into the middle class.
3. **Education:** Methodist **Sunday schools** taught millions of working-class children to read.
4. **Self-respect and leadership:** class leaders and lay preachers were ordinary miners, weavers and labourers. They learned to **speak in public, organise and lead** — skills many later used in **trade unions** and **Chartism**.
5. **Hope and comfort** for people living hard lives.
6. **Social conscience:** Wesley attacked the **slave trade** (*Thoughts upon Slavery*, 1774) and cared for the sick, prisoners and the poor.

(4) The bad effects on the people

1. **Acceptance of poverty:** critics say it taught the poor to put up with their suffering and wait for reward in heaven, rather than fight for better conditions.
2. **Obedience to employers:** some employers welcomed it because it made workers disciplined and obedient.
3. **Narrowness:** it disapproved of dancing, theatre, fairs and many popular pleasures.
4. **Emotional excess:** some meetings produced shouting, fainting and hysteria.
5. **Division:** after 1791 it split into several rival groups.

(5) Judgement — the Halévy debate

The French historian **Élie Halévy** argued that Methodism **saved England from a revolution** like France's, by turning anger into religion. **E. P. Thompson** agreed that it controlled workers, calling it a "chiliasm of despair". But many trade union leaders were Methodists — **George Loveless**, one of the **Tolpuddle Martyrs** (1834), was a Methodist lay preacher — so Methodism also taught people **how to organise** for their rights.

VERDICT · Conclusion

Methodism emerged because the Church of England had failed the poor of a changing, growing country, and because John Wesley took religion to them with extraordinary energy and organisation. Its good effects — sober, educated, self-respecting and organised working people — outweighed its bad effects, although it did teach patience more readily than protest.

WHY THIS ANSWER SCORES · Why this answer scores

The **emergence** is told as both **causes** and **story** · **good** and **bad** effects are in **separate numbered lists** · dates and names throughout (1729, 1738, 1739, 1744, 1791) · the **Halévy debate** turns description into a judgement.

Answer 6 · Methodism: Its Beginning, Its Features and Its Success

THE QUESTION · CSS 2024 · Q4 · Section A · 20 marks

How did the Methodist Movement begin? Also explain its salient features and reasons for success.

ANSWER MAP · CSS 2024 · Q4 · SECTION A

How did the Methodist Movement begin? Also explain its salient features and reasons for success.

KEY WORDS "How did it begin" · "salient features" · "reasons for success"

IT DEMANDS Three limbs: the beginning (story), the main features (organisation and beliefs), and why it succeeded. Keep them in three separate blocks.

VERDICT

Methodism began as a small Oxford club and grew into a national movement because it took a simple message of hope to people the Church had forgotten, and organised them brilliantly.

Figure 8 · The answer map for CSS 2024 · Q4 · Section A: every branch is one heading of the answer below.

DECODING THE QUESTION

Three limbs, three blocks: (1) "**How did it begin**" — the story; (2) "**salient features**" — its main characteristics: beliefs, organisation, worship ("salient" simply means main or most noticeable); (3) "**reasons for success**" — why it grew so large. Do not spend long on effects — they were not asked.

The model answer

Introduction

Methodism was an eighteenth-century Christian revival founded by **John Wesley** (1703–91) with his brother **Charles** and **George Whitefield**. Beginning as a small student club at Oxford, it grew into the largest Nonconformist church in England, with about **72,000** members at Wesley's death and several hundred thousand by 1850. It succeeded because it took a simple message of hope to people whom the Church of England had neglected, and organised them brilliantly.

(1) How Methodism began

(a) The background

The **Church of England** was lazy and remote: clergy held several parishes and lived away from them; new industrial and mining areas had no churches; the poor were ignored.

(b) The Holy Club (1729)

At **Oxford**, the Wesley brothers formed a small group that prayed, fasted, studied the Bible and visited prisoners by strict **method** — hence the nickname "**Methodists**".

(c) Wesley's conversion (1738)

After a failed mission to Georgia in America, John Wesley attended a meeting at **Aldersgate Street**, London, on **24 May 1738**, where he felt his "**heart strangely warmed**". From then on he preached that anyone could feel God's love personally.

(d) Field preaching (1739)

Refused by many churches, Wesley followed **Whitefield** and preached in the **open air** to the miners of **Kingswood** near **Bristol**. Huge crowds came, and the movement spread across the country.

(2) Its salient features

(a) Beliefs

- **Salvation for all:** God's love is open to everyone — rich or poor — not just a chosen few.
- **Personal faith:** a felt experience of being forgiven.
- **Holy living:** a changed life afterwards — no drink, gambling or swearing; honesty and hard work.

(b) Organisation

- **Classes** of about **12** members with a leader, meeting weekly to pray and check each other's progress.
- **Societies** in each place, grouped into **circuits** served by travelling preachers.
- **Lay preachers**: ordinary men — and some women — who were not ordained priests.
- The annual **Conference** (from **1744**) governed everything; the **Deed of Declaration (1784)** gave it legal control.

(c) Worship

- **Open-air preaching** in fields and market-places, then simple **chapels**.
- **Hymn singing**: Charles Wesley wrote over **6,000** hymns.
- Warm, emotional, lively services.

(d) Social work

Visiting the sick and prisoners; schools; cheap books; Wesley's opposition to **slavery** (1774).

(3) The reasons for its success

1. **It went to the people**: to the fields, mines and new towns where the Church of England was absent.
2. **A simple, hopeful message**: every person matters to God — powerful for people who felt they mattered to no one.
3. **Dignity and responsibility**: ordinary people could be class leaders and preachers.
4. **Excellent organisation**: classes, circuits and Conference kept members together and disciplined.
5. **Wesley's energy and long life**: 250,000 miles and 40,000 sermons over more than fifty years.
6. **The hymns**: easy to learn and sing, they taught the faith.
7. **The needs of a changing society**: uprooted people in growing industrial areas were looking for community and meaning.

(4) A note of balance

Success brought division: after Wesley's death the Methodists separated from the Church of England (1795) and later split into branches such as the **Primitive Methodists** (1811), who were strong among miners and farm labourers.

VERDICT · Conclusion

Methodism began with a small Oxford club and one man's religious experience, and became a national movement because its features — a simple message, personal faith, strong organisation and lay leadership — exactly met the needs of ordinary people in a changing, industrialising England.

WHY THIS ANSWER SCORES · Why this answer scores

Three limbs, three blocks, each with the examiner's word as its heading · "salient features" broken into **beliefs, organisation, worship and social work** · the reasons for success are **numbered and specific** · dates throughout.

Answer 7 · The Chartist Movement: An Account and Why It Failed

THE QUESTION · CSS 2017 · Q4 · Section A · 20 marks

Give a comprehensive account of the Chartist Movement. Why did it fail? Explain and analyse.

ANSWER MAP · CSS 2017 · Q4 · SECTION A

Give a comprehensive account of the Chartist Movement. Why did it fail? Explain and analyse.

KEY WORDS “comprehensive account” · “Chartist Movement” · “Why did it fail”

IT DEMANDS Two limbs. (1) The account: causes, the Charter, the three petitions, leaders, methods. (2) The failure: several causes, ranked. Add that most of its aims were later won.

Figure 9 · The answer map for CSS 2017 · Q4 · Section A: every branch is one heading of the answer below.

DECODING THE QUESTION

Two limbs. "**Give a comprehensive account**" = tell the whole story: what Chartism was, why it arose, its Charter, its leaders, its methods and its three petitions. "**Why did it fail? Explain and analyse**" = list the causes of failure **and** weigh them — which mattered most? A strong answer adds that most of its aims were **later won**.

The model answer

Introduction

Chartism was the first **mass working-class political movement** in history. Between **1838 and 1848** millions of British workers campaigned for the **People's Charter**, a list of six demands whose centre was the **vote for every man**. Chartism failed at the time — Parliament rejected its petitions three times — because it was divided, faced a strong and united state, and lost support whenever times improved. Yet within seventy years almost all its demands had become law.

(1) Why Chartism arose

- **The "great betrayal" of 1832:** workers had campaigned for the **Reform Act**, but it gave the vote only to middle-class men. About four men in five still had no vote.
- **The New Poor Law (1834):** the poor who asked for help were forced into harsh **workhouses** — called "**Bastilles**" after the French prison.
- **Hard times:** a deep **depression** in **1837–42** brought unemployment and hunger; the **Corn Laws** kept bread dear.
- **Factory grievances** and the transportation of the **Tolpuddle Martyrs** (1834) for forming a union.

(2) The Charter

Drawn up in **May 1838** by **William Lovett** of the **London Working Men's Association** (with the help of Francis Place).

THE PEOPLE'S CHARTER, 1838

Chartism failed as a movement — but five of its six demands became law

THE SIX POINTS (1838)	WHEN THEY BECAME LAW
1. A vote for every man over 21	1918 (partly 1867 and 1884)
2. A secret ballot	1872 — Ballot Act
3. No property qualification for MPs	1858
4. Payment of MPs	1911
5. Equal constituencies	1885 (roughly equal)
6. Annual parliaments	Never

The Chartists lost every battle between 1839 and 1848 and still won the argument: Britain became the democracy they described, one step at a time.

Figure 10 · The six points of the People's Charter, and when each became law.

(3) Leaders and methods

- **William Lovett** — "**moral force**": win by education, argument and peaceful petition.
- **Feergus O'Connor** — a fiery Irish speaker who ran the *Northern Star* newspaper (1837) and sometimes spoke of "**physical force**" if Parliament refused.
- **Methods**: mass meetings, torchlight processions, a national **Convention** (1839), and giant **petitions** to Parliament.

(4) The three petitions

Year	Signatures	What happened
1839	about 1.3 million	Rejected by 235 votes to 46. In November the Newport Rising in Wales: soldiers killed about 22; the leader John Frost was transported
1842	about 3.3 million	Rejected by 287 to 49. The " Plug Plot " strikes across the north — workers pulled the plugs from factory boilers
1848	claimed 5.7 million; about 2 million genuine	The great meeting at Kennington Common , London (10 April); the government prepared troops and 85,000 special constables; the petition contained fake names ("Queen Victoria", "Mr Punch") and was laughed out

(5) Why Chartism failed

(a) Divided leadership and methods

Lovett's **moral force** and O'Connor's **physical force** quarrelled; O'Connor fell out with almost everyone; his **Land Plan** (to settle workers on smallholdings) collapsed. A divided movement could not act together.

(b) A strong and united state

The government used the **army** (General **Napier** in the north), the new **police**, and the new **railways** and **electric telegraph** to move troops quickly. The landed aristocracy and the middle class stood together against it.

(c) Middle-class hostility

After 1832 the middle class had the vote and did not want to share it. Middle-class reformers backed the **Anti-Corn Law League** instead, which was richer and better organised.

(d) Economic recovery

Chartism was strongest in bad years (**1839, 1842, 1848**) and faded whenever trade improved; the railway boom of the 1840s brought jobs. "Knife-and-fork" (hunger) support did not last.

(e) Reforms removed grievances

The **Mines Act** (1842), the **repeal of the Corn Laws** (1846) and the **Ten Hours Act** (1847) showed that Parliament could help workers without giving them votes.

(f) No way to force Parliament

Parliament simply voted the petitions down. Without violence — which most Chartists would not use — the movement had no other weapon.

KEY IDEA · Which cause mattered most?

The **decisive** reason was the **strength and unity of the state and the propertied classes**: faced with a government ready to use force and a Parliament that would not listen, a divided movement of the voteless had no way to win. Economic recovery then drained away its mass support.

(6) Did Chartism really fail?

In the long run, no. Five of the six points became law: **no property qualification** for MPs (**1858**), the **secret ballot** (**1872**), roughly **equal constituencies** (**1885**), **payment of MPs** (**1911**), and votes for **all men** (**1918**). Only **annual parliaments** never came. Chartism also taught working people to organise and passed its experience to the trade unions and, later, the **Labour Party**.

VERDICT · Conclusion

Chartism failed because it was divided, faced a strong and united ruling class, and lost its followers whenever times improved. But it failed only in the short term: its programme became the blueprint of British democracy.

WHY THIS ANSWER SCORES · Why this answer scores

The **account** is truly "comprehensive" — causes, Charter, leaders, methods, all three petitions with figures · the **failure** is explained under separate headings **and analysed** (the key box ranks the causes) · the **long-term success** gives balance and a strong ending.

Answer 8 · Why Millions Supported the Chartist Movement

THE QUESTION · CSS 2024 · Q3 · Section A · 20 marks

Describe the reasons due to which millions of people united in support of the Chartist Movement in the mid-19th century to attain democratic rights for the working classes.

ANSWER MAP · CSS 2024 · Q3 · SECTION A

Describe the reasons due to which millions of people united in support of the Chartist Movement in the mid-19th century to attain democratic rights for the working classes.

KEY WORDS "reasons" · "millions of people united" · "democratic rights" · "working classes"

IT DEMANDS Causes only: why did so many people support Chartism? Group the reasons (political, economic, social, organisational) and show how they joined together.

VERDICT

Millions supported Chartism because the vote seemed the key to every other grievance — the betrayal of 1832, the workhouse, hunger and the factory — and because the Charter gave them one simple aim.

Figure 11 · The answer map for CSS 2024 · Q3 · Section A: every branch is one heading of the answer below.

DECODING THE QUESTION

A **causes-only** question. "**Describe the reasons**" = explain why so many people supported Chartism. "**Millions united**" — show why workers with **different** grievances joined **one** movement. "**Democratic rights for the working classes**" — the vote. Do not write about the failure — it was not asked.

The model answer

Introduction

Between **1838 and 1848** the **Chartist** petitions to Parliament were signed by about **1.3 million** (1839), **3.3 million** (1842) and perhaps **2 million** (1848) people — at a time when the whole adult population of Britain was about 10 million. They wanted the **People's Charter**, above all the **vote for every man**. Millions united because **political anger** and **economic hunger** came together, and the Charter offered **one simple remedy** for all their grievances.

(1) Political reasons

(a) The "great betrayal" of 1832

Working men had marched and campaigned for the **Reform Act of 1832**. When it passed, it gave the vote only to middle-class men who owned or rented property worth **£10** a year. Working men felt used and betrayed.

(b) The belief that the vote was the key

Workers reasoned: Parliament makes laws for those who elect it. If working men could vote, Parliament would make laws for working men — on wages, hours, bread and the Poor Law. The vote was the **key to every other reform**.

(c) The Whig government's harsh laws

The new, middle-class-elected Parliament seemed to act against the workers: the **New Poor Law** (1834) and the punishment of the **Tolpuddle Martyrs** (1834).

(2) Economic reasons

- **The depression of 1837–42**: factories closed, wages were cut, unemployment soared.
- **Dear bread**: the **Corn Laws** kept out cheaper foreign grain.
- **Ruined craftsmen: handloom weavers and framework knitters**, replaced by machines, were starving — they were among the most loyal Chartists.

KEY IDEA · "Knife-and-fork" Chartism

The Chartist leader **J. R. Stephens** said Chartism was "**a knife-and-fork question**" — a question of food. Support rose in the hungry years **1839, 1842 and 1848**.

(3) Social reasons

- **The New Poor Law** (1834): the poor who needed help had to enter a **workhouse**, where husbands, wives and children were separated and conditions were made deliberately harsh. The poor called them "**Bastilles**". The **anti-Poor Law movement** in the north flowed straight into Chartism.
- **Factory conditions**: long hours, child labour, dangerous machines.
- **Town life**: slums, disease and no say in how towns were run.

(4) Organisation, leaders and the Charter

- **The Charter** itself: six short, clear demands, easy to understand and to sign.
- **Feergus O'Connor**: a powerful speaker who toured the country.
- **The Northern Star*** (1837): O'Connor's newspaper, read aloud in pubs and workshops, sold up to 50,000 copies a week.
- **Mass meetings and torchlight processions** made people feel part of something large.
- **Local associations**, the **National Charter Association** (1840) and a **National Convention** (1839).

(5) Why so many different people united

Group	Why they joined
Handloom weavers, knitters	Ruined by machines; wanted protection
Factory workers	Long hours, low pay; wanted the Ten Hours Bill
The unemployed and poor	Hated the workhouse
Skilled artisans (London)	Wanted political equality and education
Welsh miners and ironworkers	Harsh conditions (Newport Rising, 1839)

All their different grievances pointed to **one answer: the vote**. The Charter united them.

VERDICT · Conclusion

Millions of working people united behind Chartism because the betrayal of 1832, the hated workhouse, hunger and hard work all led to the same conclusion: only the vote would give them a Parliament that listened. The Charter turned many separate grievances into one simple demand for democratic rights.

WHY THIS ANSWER SCORES · Why this answer scores

It stays on **reasons only** · the reasons are **grouped** (political, economic, social, organisational) · it explains "**millions united**" with a table of different groups · figures (1.3m, 3.3m, £10) and a **quotation** (Stephens) add weight.

Answer 9 · Socialism and Liberalism in Nineteenth-Century Britain

THE QUESTION · CSS 2025 · Q5 · Section A · 20 marks

Compare and contrast the ideologies of Socialism and Liberalism in Britain during the 19th century, examining their differing approaches to issues such as economic inequality, social justice and the role of the state.

ANSWER MAP · CSS 2025 · Q5 · SECTION A

Compare and contrast the ideologies of Socialism and Liberalism in Britain during the 19th century, examining their differing approaches to issues such as economic inequality, social justice and the role of the state.

KEY WORDS "Compare and contrast" · "Socialism" · "Liberalism" · "economic inequality" · "social justice" · "role of the state"

IT DEMANDS Define both, then compare point by point on the three named issues, with similarities as well as differences, and show how both changed during the century.

VERDICT

Liberalism and Socialism began as opposites — the free individual against the community — but by 1900 New Liberals and Fabians had moved towards each other, and the welfare state grew from their meeting.

Figure 12 · The answer map for CSS 2025 · Q5 · Section A: every branch is one heading of the answer below.

DECODING THE QUESTION

"**Compare and contrast**" = show similarities **and** differences. The examiner names **three issues** — **economic inequality, social justice, the role of the state** — so each needs its own heading, with both ideologies side by side. An **ideology** is simply a connected set of ideas about how society should be run. Define both first, and show how both **changed** during the century.

The model answer

Introduction

The Industrial Revolution created a new society of factories, towns, great wealth and great poverty. Two sets of ideas — **ideologies** — offered opposite answers to the question "what should be done about it?" **Liberalism** put the **free individual** first: let people trade and work freely and everyone will become richer. **Socialism** put the **community** first: the workers who made the wealth should share it. They began as opposites, but by 1900 each had moved towards the other.

FOUR IDEAS FOR AN INDUSTRIAL SOCIETY

Each answered the same question: what should government do about the new world of factories and towns?

Figure 13 · Four ideas for an industrial society — Liberalism and Socialism, with Utilitarianism and Fabianism between them.

(1) What each ideology meant

(a) Liberalism

- **Freedom of the individual** — to think, speak, worship, trade and work.
- **Free trade** and **laissez-faire** ("let it be" — government should not interfere in business).
- **Thinkers and leaders:** **Adam Smith** (*The Wealth of Nations*, 1776), **Richard Cobden** and **John Bright** (the Manchester School), **J. S. Mill** (*On Liberty*, 1859), **Gladstone**.

(b) Socialism

- **The community comes first; cooperation** should replace competition.

- Land, factories and wealth should be **owned in common** or by the state, and shared fairly.
- **Thinkers and leaders: Robert Owen** (New Lanark), the **co-operative movement** (Rochdale, 1844), **Karl Marx** (who lived in London), the **Fabians** (1884), **Keir Hardie**.

(2) On economic inequality

Liberalism	Socialism
Inequality is natural and even useful : it rewards effort and talent and encourages hard work.	Inequality is unjust : it comes from a few people owning the land and factories while others own nothing.
Free trade and growth make everyone better off in the end — "a rising tide lifts all boats".	Growth under capitalism makes the owners richer and leaves the workers poor; wealth must be shared .
Example: the repeal of the Corn Laws (1846) to make bread cheaper.	Example: Owen's New Lanark showed that fair treatment and sharing could still be profitable.

(3) On social justice

Liberalism	Socialism
Justice means equal rights and equal opportunity — the same laws for all, religious freedom, open careers.	Justice means equal conditions — decent housing, work, health and education for everyone.
Self-help : individuals rise by their own effort (Samuel Smiles , <i>Self-Help</i> , 1859).	Mutual help : people rise together through unions, co-operatives and the community.
Poverty is often a personal failing; charity and the Poor Law are enough.	Poverty is caused by the system; it must be changed.

(4) On the role of the state

Liberalism	Socialism
A small state : keep order, defend the country, protect property and contracts.	A large state or community: own, plan and provide.
Laissez-faire : no interference in wages, prices or trade.	The state should control industry and protect workers.
Taxes low; spending small (Gladstone's "retrenchment").	Taxes to pay for social services.

(5) Similarities

Despite their differences, the two ideologies shared much:

- Both were **products of the Industrial Revolution** and both claimed to speak for progress.
- Both **opposed aristocratic privilege** and wanted a wider vote.

- Both valued **education** and reason.
- Both mainly preferred **peaceful, parliamentary** change (except Marx).
- Both split into **moderate** and **radical** wings.

(6) How both changed — the meeting point

- **Liberalism changed:** **J. S. Mill** accepted that the state must sometimes act (education, factory laws); by the 1880s "**New Liberals**" such as **T. H. Green** argued that real freedom needs health, schooling and security — which only the state could provide. This led to the Liberal welfare reforms of **1906–14**.
- **Socialism changed:** the **Fabians** (1884) rejected revolution and sought socialism **gradually through Parliament** — "the inevitability of gradualness". The **Labour Party** (1900) worked with the Liberals at first.

KEY IDEA · The meeting point

By 1900 **New Liberals** accepted state help for the poor, and **Fabian socialists** accepted gradual reform. The **welfare state** of the twentieth century was built on the ground where they met.

VERDICT · Conclusion

Nineteenth-century Liberalism and Socialism disagreed sharply: Liberals saw inequality as natural, justice as equal rights and the state as small; Socialists saw inequality as unjust, justice as equal conditions and the state as the community's tool. Yet both were reforming creeds born of industrial Britain, and by the century's end each had moved far enough towards the other to lay the foundations of the welfare state.

WHY THIS ANSWER SCORES · Why this answer scores

Definitions first · one heading for each of the three named issues, with the two ideologies **side by side** in tables · **similarities** as well as differences — which "compare and contrast" requires · **names and dates** for each point · the **change over time** gives a powerful conclusion.

Short Notes

The Industrial Revolution

THE QUESTION · CSS 2015 · Q8(a) · Paper I · short note (10 marks)

Write a short note on: Industrial Revolution

The **Industrial Revolution** was the change in Britain, between about **1750 and 1850**, from making goods **by hand at home** (the **domestic system**) to making them **by machine in factories** (the **factory system**), powered by water, then by **steam** and **coal**. The phrase was made famous by **Arnold Toynbee** (1881).

- **Causes:** a growing population (8.9 million in 1801); the **Agricultural Revolution**; capital from trade and empire; coal and iron together; canals (1761) and railways (1830); stable government after 1688.
- **Key inventions:** **Kay's** flying shuttle (1733), **Hargreaves's** jenny (c.1764), **Arkwright's** water frame (1769), **Watt's** steam engine (1769), **Crompton's** mule (1779), **Cartwright's** power loom (1785); **Darby's** coke-smelted iron (1709).
- **Effects:** Britain became the "**workshop of the world**"; fast-growing towns (Manchester 75,000 → 300,000, 1801–51); slums and **cholera**; child labour and then **Factory Acts** (1833, 1847); a new **middle class** and **working class**; the **Reform Act** (1832) and **Chartism**; Methodism and new ideas.
- **Debate:** optimists (**Ashton**) v pessimists (**Hobsbawm, Thompson**).

In one line: it made Britain the first industrial nation and the richest in the world, at a heavy cost to the first generation of workers.

The Methodist Movement

THE QUESTION · CSS 2015 · Q8(b) · Paper I · short note (10 marks)

Write a short note on: Methodist Movement

Methodism was a Christian revival begun by **John Wesley** (1703–91), with his brother **Charles** and **George Whitefield**.

- **Origins:** the **Holy Club** at Oxford (1729), mocked as "Methodists" for their strict method; Wesley's conversion at **Aldersgate Street** on **24 May 1738** ("heart strangely warmed"); **open-air preaching** from 1739, first to the miners of **Kingswood**, Bristol.
- **Why it spread:** a neglectful Church of England; new industrial and mining areas without churches; a simple message that **salvation is open to all**.
- **Organisation:** **classes** of 12, societies, **circuits**, **lay preachers**, the annual **Conference** (1744); Charles Wesley's 6,000 hymns; Wesley rode 250,000 miles.

- **Effects:** sobriety, thrift and **Sunday schools**; working-class leaders trained for unions and Chartism; opposition to slavery. Critics: it taught the poor to accept their lot.
- **Debate:** **Halévy** — it saved England from revolution; **Thompson** — a "chiliasm of despair".
- **Separation:** it left the Church of England after Wesley's death (1791); 72,000 members then.

The Methodist Movement (set again)

THE QUESTION · CSS 2025 · Q8(b) · Section B · short note (10 marks)

Write a short note on: **Methodist Movement**

TRAP — DO NOT FALL INTO IT · The same short note, ten years later

2025 set **exactly the same short note** as 2015. Write the note above. To make it fresher, add one line on its **legacy**: Methodism became a worldwide church with tens of millions of members, and its chapels, Sunday schools and lay preachers helped shape the British **Labour movement** — it was said that Labour owed "more to Methodism than to Marx".

Fabianism

THE QUESTION · CSS 2016 · Q8(c) · Section B · short note (10 marks)

Write a short note on: **Fabianism**

Fabianism is the idea that **socialism should come gradually and peacefully, through Parliament and reform**, not through revolution.

- **The Fabian Society** was founded in London in **January 1884**.
- **The name** comes from the Roman general **Quintus Fabius Maximus**, "the Delayer", who defeated Hannibal by patience rather than one big battle.
- **Leaders:** **Sidney and Beatrice Webb**, **George Bernard Shaw**, Annie Besant, Graham Wallas; later H. G. Wells.
- **Ideas:** "**the inevitability of gradualness**" (Sidney Webb); public ownership of key industries; a national minimum of wages, health and education.
- **Method:** "**permeation**" — careful research and argument to persuade politicians and officials of **all** parties; the ***Fabian Essays in Socialism*** (1889).
- **Achievements:** a founding member of the **Labour Party** (1900); founded the **London School of Economics** (1895) and the *New Statesman* (1913); Sidney Webb wrote Labour's **Clause IV** (1918); Beatrice Webb's **Minority Report** (1909) foreshadowed the welfare state.

In one line: Fabianism made British socialism **gradual, practical and parliamentary** — the path the Labour Party followed.

Utilitarianism

THE QUESTION · CSS 2022 · Q8(c) · Section B · short note (10 marks)

Write a short note on: Utilitarianism

Utilitarianism is the theory that every law, institution and action should be judged by one test: does it produce "**the greatest happiness of the greatest number**"?

- **Founder: Jeremy Bentham** (1748–1832), *An Introduction to the Principles of Morals and Legislation* (**1789**). Pleasure is good and pain is bad; a good law increases happiness and reduces pain.
- **Method:** rational, scientific government — inquiries, statistics, inspectors. Bentham designed the **Panopticon**, a model prison.
- **Followers: James Mill, John Stuart Mill** (*Utilitarianism*, 1863), and the "**Philosophic Radicals**".
- **Influence on reform: Edwin Chadwick**, Bentham's secretary, shaped the **New Poor Law** (1834) and the **Public Health Act** (1848); Utilitarian ideas influenced the **Reform Act of 1832**, prison and legal reform, and the modern civil service.
- **Criticism:** it could be cold and mechanical — the workhouse was "efficient" but cruel; Dickens mocked it in *Hard Times* (Mr Gradgrind); J. S. Mill added that some pleasures are higher than others.

In one line: Utilitarianism gave nineteenth-century reformers a simple test for every law, and helped build the modern, active British state.

Part Two — The Past MCQs, Solved

CSS 2025 · MCQ 6

Which religious movement emphasised personal piety and social reform?

(A) Puritanism	(B) Anglicanism	(C) Methodism	(D) None of these
----------------	-----------------	---------------	-------------------

REMEMBER · Answer: C. Methodism

Methodism, founded by **John Wesley** from 1738, stressed **personal piety** (a changed, holy life) and **social reform** — Sunday schools, care for the poor and prisoners, opposition to slavery.

CSS 2025 · MCQ 7

What was the main political demand of the Chartists?

(A) Women's suffrage	(B) Universal male suffrage	(C) Free trade	(D) None of these
----------------------	-----------------------------	----------------	-------------------

REMEMBER · Answer: B. Universal male suffrage

The Chartists' central demand was **universal male suffrage** — the vote for every man over 21 — the first of the six points of the People's Charter (1838).

Part Three — Five Predicted Questions, with Outlines

WHAT THE EXAMINER HAS ASKED · Why these five

They cover the parts of syllabus Head VII that have **not yet been set as full questions**, or angles the examiner is likely to try next.

Predicted 1 · "Discuss the causes and consequences of the Agricultural Revolution in England."

- **Introduction:** open fields → enclosed farms; thesis: it fed the Industrial Revolution but hurt the cottager.
- **Causes:** growing population and demand; high grain prices (French wars); new ideas (Tull, Townshend, Bakewell, Coke, Young); private Enclosure Acts (about 4,000).
- **Consequences:** more food; bigger farms; richer landlords; capital and labour for industry; loss of the common; landless labourers; Swing Riots (1830).
- **Verdict:** economically a great success; socially painful for the rural poor.

Predicted 2 · "Why did the British state begin to intervene in factories and towns in the first half of the 19th century?"

- **Introduction:** from *laissez-faire* to inspection and regulation.
- **Reasons:** the evidence of reports (Sadler 1832, Chadwick 1842); campaigners (**Lord Shaftesbury**, Richard Oastler); cholera fear; Utilitarian ideas; Tory paternalism; pressure from Chartism and workers.
- **Measures:** Factory Acts 1833, 1844, 1847; Mines Act 1842; Public Health Act 1848.
- **Verdict:** humanity, fear and new ideas combined; intervention was still limited before 1870.

Predicted 3 · "Assess the influence of Utilitarianism on nineteenth-century British reform."

- **Introduction:** Bentham's "greatest happiness" test.
- **Influence:** New Poor Law 1834 (Chadwick); public health 1848; law and prison reform; the Reform Act 1832; civil-service reform.
- **Limits:** Tory paternalism, evangelical religion and working-class pressure mattered too; Utilitarian reforms could be harsh (the workhouse).
- **Verdict:** it gave reform its method and much of its machinery, but not its heart.

Predicted 4 · "Trace the growth of trade unionism in Britain from the Combination Acts to the formation of the Labour Party."

- **Stages:** Combination Acts (1799–1800) → legal 1824; Owen's GNCTU and **Tolpuddle** (1834); "new model" unions of skilled workers (1850s, ASE 1851); **TUC** 1868; legal protection (1871, 1875); **New Unionism** of the unskilled (match girls 1888, dockers 1889); **Labour Representation Committee** (1900).
- **Verdict:** from illegal conspiracy to political party in a century.

Predicted 5 · "'Methodism saved England from revolution.' Discuss."

- **For (Halévy):** turned discontent into religion; taught order, thrift and obedience; Wesley a Tory who opposed rebellion.
- **Against:** other reasons — reform, repression, economic growth, the British constitution; Methodists often led protest (Tolpuddle, Chartism, miners' unions); Thompson: "social control", not salvation.
- **Verdict:** Methodism helped channel discontent peacefully, but it was one factor among many, and it also trained the leaders of peaceful protest.
